How LEVELITE Works

All LEVELITE optic probes operate by sensing the difference between liquid and air (or other gas) using an infrared light source and detector.

An optic LED produces infrared light that is directed down the probe. When dry, the light is reflected through the probe’s conical tip and is sensed by the photodetector. When the probe tip is wet, the light at the photodetector produces a change in the output.

LEVELITE offers self-contained level switches as well as electro optic and fiber optic level systems. Electro optic probes are designed for general purpose areas and fiber optic probes for hazardous areas. These probes are used in conjunction with a universal controller, which can be used for level alarms or pump control. The universal controller has adjustable time delay and field selectable “fail-safe” settings.
Sepra-Lite® operates by sensing the difference between liquid and air (or other gas) using an infrared light source and detector. When the sensor is wetted, the transmitted light is lost into the liquid. When dry, the transmitted light is reflected by the prism back to the photo detector. This approach does not rely on any electrical interaction with the liquid. It has no moving parts and provides two main advantages: a wide variety of applications and the ability to separate the electronics for safety and troubleshooting.

Separability of the electronics module and sensor body is a key advantage. Since the sensor body is a passive part of the system, there is no need to shut down a machine or process when troubleshooting the Sepra-Lite® assembly. To verify operation, simply remove the electronics module and look into the “window”. If it is dark, liquid is present; if it is light, sensor is dry. By comparing this with the unit’s output or LED indicator, operation is easily and safely verified. Sepra-Lite® eliminates the need to open tanks or remove sensors to troubleshoot or repair.

When applying Sepra-Lite®, specific gravity, conductivity, vibration, and tight mounting constraints are not a problem. Dark, foggy, or colored liquids, such as: oils (light and heavy), glycols, detergents, heavy syrups, or caustics perform well. Sepra-Lite® is available in Brass and Teflon® (PFA). Two different mounting types provide a leak proof and/or high-pressure seal. To make using it even easier, the small overall size and minimal insertion are perfect where “in-pipe” use or “tight quarters” are encountered.

### General Specifications
- No external controller required
- Synchronous refractive detection system
- 10.8 to 26.4 VDC operating voltage
  (30mA consumption)
- NPN open collector output, includes selectable wet or dry sinking
- 100 mA output current (maximum) and adjustable sensitivity
- Easy to see red LED alarm indicator
- EMI, overcurrent and reverse polarity protected.
- NEMA 4X (IP 66) electronics module.

### A Popular Industry Choice for...
- Detecting liquid/gas phase change in air conditioners
- Oil levels in gear boxes
- Detecting dangerous leaks in laboratory and analytical machines
- Monitoring leakage in dual containment systems
- Precision control of chemical dispensing equipment

### Brass Sepra-Lite® with Quartz Window
Ideal for high pressure applications. The brass body withstands some of the most abusive applications.

- Use as sight glass for level verification when electronics are removed
- Adjustable sensitivity
- 600 psig (42kg/cm²) at -40° F to 185° F (-40° C to 85° C)
- PVC jacketed cable, 4 conductor (user extendable)

Electro Optic Level Systems

**ELECTRO OPTIC CONTROLLERS**

Electro Optic Level Switch Controller, One Channel
LEVELITE's perfect choice for simple "one switch" applications.

- Protect pumps and warn of "dry" running
- Prevent overflow or warn of material shortage
- Time based filling and emptying

**Dimensional Drawing**

General Specifications

- AC: 120 or 240V (50/60 Hz), 1.4 VA
- DC: 12 or 24V (-25 to +15%), 1.8 W
- Accepts electro optic probes or customer supplied float switches
- 10 A, SPDT relays (1/3 hp @ 120 VAC)
- 1-60 second time delay adjustment
- High or low level failsafe adjustment
- LED alarm status indicator
- Polycarbonate enclosure

Electro Optic Controllers use with LEVELITE electro optic probes

GLL101S1N

GLL102S2N
Electro Optic Level Systems

Detect leaks, protect pumps and prevent spills with LEVELITE's miniature Electro Optic Level Sensors for OEM systems.

**General Specifications**
- Operates with all electro optic controllers
- Repeatability: 0.5 mm
- Includes 25' (7.62m) PVC jacketed cable (user extendable)
- 1/2" NPT process and conduit connections

**A Popular Industry Choice for...**
- Ultrapure water and water treatment
- Semiconductor and Pharmaceutical manufacturing
- Laboratory testing and chemical dispensing systems
- Leak detection in electronic enclosures, dual containment piping, and diked areas
- Beverages, chemicals, acids, caustics, water, epoxys, lubricants, glycols, vegetable oils, adhesives and solvents

Versatility is the key to LEVELITE's Electro Optic Level Sensors. Ideal for controlling any transparent or translucent liquid.

- Compact sensors fit anywhere
- PFA Teflon® probe for all high purity and corrosive liquids
- Detects liquids regardless of conductivity, color or specific gravity
- Eliminates pump cavitation when installed in advance of the pump
- Automatic pump control and high or low alarms

**GLL110000 ▼ Polysulfone Electro Optic Probe**
This probe is preferred for most oil, water and mildly corrosive applications.

- LEVELITE'S lowest priced probe
- Operating Temperature: -20° F to 200° F (-29° C to 94° C)
- Max Pressure: 100 psig (7kg/cm²)

**GLL110118 ▼ Polysulfone Electro Optic Sanitary Probe**
Ideal for applications in the food and pharmaceutical industries.

- 1½" Tri-Clover type flange for CIP/other sanitary applications
- 1/2" NPT conduit connection
- Operating Temperature: -20° F to 200° F (-29° C to 94° C)
- Max Pressure: 100 psig (7kg/cm²)

**GLL110010 ▼ PFA Teflon® Electro Optic Probe**
Our best sensor for any corrosive or high purity liquid. Widely used in manufacturing of semiconductors, high purity liquids, ultrasonic cleaning and photography.

- Widely used in corrosive liquids
- Made from non-stick Teflon® to prevent coating
- Operating Temperature: -20° F to 200° F (-29° C to 94° C)
- Max Pressure: 100 psig (7kg/cm²)
LEVELITE’s quartz tip electro optic probes are designed for use with quartz tips (see below). The quartz tips are excellent for high pressure or high temperature applications, and also provide excellent corrosion resistance to many chemicals and solvents. The Teflon® light guide on the probe tip concentrates the light coming through the probe for greater signal strength.

Order probe and quartz tip separately.

**GLL110020 ▼ Polypropylene Quartz Tip Electro Optic Probe**

- Excellent for high level applications
- Quartz sensing tips built to your length specification. Order separately
- Operating Temperature: -20° F to 50° F (29° C to 65° C)
- Max Pressure: 100 psig (7 kg/cm²)

**GLL110021 ▼ 316 SS Quartz Tip Electro Optic Probe**

- Excellent for high level applications
- Quartz tip length built for your application. Order separately.
- Operating Temperature: -20° F to 212° F (-29° C to 100° C)
- Max Pressure: 500 psig (35 kg/cm²)

**Quartz Tips**

- ⅜” to 10” Insertion Length
- Rulon® Seal
- Teflon® Light Guide
- Viton® O-Ring

GLL numbers increase by 10 with every inch (25.4mm). No half sizes.

Fiber Optic Level Systems

Detect leaks, protect pumps and prevent spills in hazardous areas with LEVELITE’s miniature Fiber Optic Level Sensors for OEM systems.

**FIBER OPTIC CONTROLLER**

**Description** Part Number
120VAC GLL102F1N
240VAC GLL102F2N
12VDC GLL102F3N
24VDC GLL102F4N

**General Specifications**
- AC: 120 or 240V (50/60 Hz), 1.4 VA
- DC: 12 or 24V (-25% to +15%), 1.8 W
- Accepts fiber optic probes
- 10 A, SPDT relays (1/3 hp @ 120 VAC)
- 1-60 second time delay adjustment
- High or low level failsafe adjustment
- LED alarm status indicator
- Polycarbonate enclosure
- For flammable materials, fiber optic controllers eliminate all voltage at the sensor

**Fiber Optic Level Switch and Pump Controller, 2 Channel**

Choose fiber optics to maintain maximum safety in hazardous areas
- Provides dual alarms
- Automatic pump up or pump down operation
- Accepts fiber optic probe input

**Description** Part Number
120VAC GLL102F1N
240VAC GLL102F2N
12VDC GLL102F3N
24VDC GLL102F4N

Both probe models contain all of the necessary electronics internally, allowing them to be used without a separate controller. By combining circuit board electronics with photo detector sensing abilities, this probe can perform control or output functions. Signal processing takes place inside the probe, and an output change indicates and alarms when the probe tip is wet.

- Point Level Sensor, Leak Detector, Pump Protector
- Interfaces With Computer/PLC
- Self Contained Stand-alone Sensor
- Surface Mount Electronics
- For Corrosives and High Purity Liquids

- GLL100240/5VDC, 20 mA maximum - sinking (output low when wet) and sourcing (output high when wet)
- GLL100250/12-32 VDC, 50 mA maximum - sourcing (output high when wet)
- User extendable to 1000 feet (300m) using Belden 8443, 3 conductor, 22 gauge or equivalent
- Operating Temperature: -20°F to 175°F (-29°C to 80°C)
- Max Pressure: 100 PSI (7 kg/cm²)

**Dimensions** inch (mm)

**Wiring Diagram**
LEVELITE's Capacitance Proximity Switch is both economical and versatile.
For polyethylene, polypropylene or fiberglass tanks, LEVELITE's Proximity Switch is an inexpensive solution for sensing level without cutting through the tank wall. The secret is the sensor's ability to "see" through plastics. Features include: Eliminates tank emptying for installation, "Weld Fittings" for securing to plastic tanks, Optional "Well" for metal tank installation.

In addition to tank level, the Capacitance Proximity Switch will...

- Sense leaks in dual containment pipes through the pipe walls
- Control bottle filling - switches can see through glass or plastic
- Sense liquid level in site glasses

A Popular Industry Choice for...

- Plating Company process or bulk chemical levels
- Industrial Wastewater Treatment waste neutralization chemicals
- Pure Water Systems and Semiconductor Fabricators

GAL100100 ▼ Capacitance Proximity Switch

- Nema 4X (IP66) PBT body
- 90-250 VAC, 2.5mA max leakage
- Normally open output, 200mA max load
- Surge protected
- For heavier loads, add the relay assembly

Typical Wiring
Capacitance Proximity Switch (continued)

**Weld Fitting**
Provides a threaded mounting for plastic tanks.

- Suitable for Polyethylene or Polypropylene tanks
- 2" (50.8mm) diameter weld area
- 30mm internal threads

<table>
<thead>

</tbody>
</table>

**GAL110100 ▼ Polypropylene Well Fitting**
Provides a thread for mounting switch and isolates the switch from tank contents.

- For mounting switch in metal tank
- 1 ¼" NPT Polypropylene Well
- 30mm internal thread

**GAL110103 ▼ Relay Assembly**
Use with Capacitance Proximity Switch for dry contact/relay output.

- DPDT Relay and Socket
- 10 Amp, 120VAC
Dual Float Controller

GLL100000 ▼ Dual Float Controller
The Dual Float Controller has been designed especially for use with customer supplied floats. It can perform single or dual channel pump control and is a very economical way to monitor your system.

- Low cost pump control
- 120VAC or 240VAC operation
- Compact design

General Specifications

Power: 120VAC or 240VAC, (50/60)Hz, 1.8Watts
Control Elements: 1 or 2 reed switches or floats (customer supplied)
Sense Voltage: 5VDC
Sense Current: 6mA
Output Relay: SPDT, 10Amps at 240VAC, 10Amps at 30VDC, 1/3HP at 120VAC, 1/2HP at 240VAC
Operating Temperature: -20° F to 150° F (-28° C to 65° C)
Electrical Connection: Screw terminal block
Dimensions: 4.6” x 4.3” x 1.8” (16.8mm x 109.2mm x 45.7mm)

Dimensions inch (mm)

# 8 SCREW MOUNT HOLES
