

Hubodometers are used on the wheel of anything that is towed. Mounted directly over the axle, they measure the miles traveled by using a fixed ratio which is determined by tire size/rating, for example, 765 revolutions per mile for a typical 205/75D15 tire.

The low profile, lightweight Slim Hubodometer provides an accurate count of mileage traveled for trailers and towable campers in an impact resistant housing. By keeping an accurate count, maintenance operations can be easily performed at the manufacturer's required intervals.

This product is ideally suited for tracking:

- Mileage-based maintenance intervals
- Mileage-based warranties
- Rental charges based on mileage

- Low profile design mounts within bulge of tire!
- Impact resistant materials
- Sealed, weatherproof design
- 25% lighter than closest competition

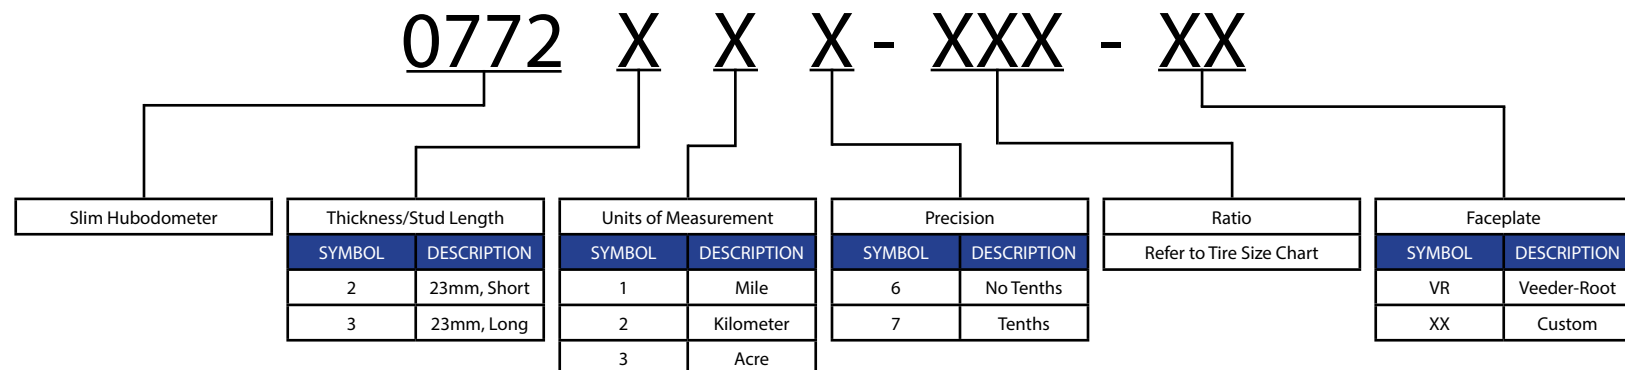

Specifications

DISPLAY DIGITS	XXXXXX.X
WEIGHT	0.21 kilograms
DEPTH	23 millimeters
STUD LENGTH	13.5 millimeters + 6 millimeters

RANGE - TIRE SIZES	Approx. 3250
IMPACT RESISTANCE	Very good. Flexible Lexan
WARRANTY	500K miles
ACCURACY	+/- 2%

Counts up when moving in forward or reverse (mounted on left or right side of trailer)
