Introduction

Within the Danaher Controls A103 family you’ll find a product to meet nearly every requirement for panel mounted control and indication. Housed in a DIN standard 36mm x 72mm case, the A103-009 is perfect for applications that require rate metering and background totalization with a scaled pulsed output. With independently programmable scale factors for rate and total, meaningful engineering units, such as Gallons per Minute and Total Gallons, can be displayed for both values. The pulsed output enables retransmission to a remote totalizer or control device.

The supertwist LCD display with 8 digit display for total, and 4 digit plus legend for rate, provides easy viewing at a glance. For conditions where ambient light is poor, the display can be backlit by connecting an external DC (10-28 Volt) power supply. A single unit can accept NPN & dry contact inputs for low speed (30Hz) counting and PNP or square wave signals for high speed applications up to 10 kHz.

Powered by either one or two replaceable 3V Lithium batteries, this unique design allows for a new battery to be installed before removing the old one, thereby retaining count total and program data. A low battery indicator appears on the screen to provide a warning several weeks before the end of battery life. If two batteries are used simultaneously, the individual expected life doubles to 10 years.

Setup is quick and simple as the two front panel keys are used to scroll through 7 menu choices. Several option modules are also available that provide added functionality and convenience.

Features

- Large, easy to read 8-digit supertwist LCD (4-digit, with legend for rate) with backlighting capability
- 3 Volt lithium battery provides long life and eliminates the need for external power
- Accepts low speed (30 Hz) NPN & dry contact inputs, and high speed (10 kHz) PNP signals or square wave signals
- Total value resettable remotely or from the front panel
- Independent scale factors for total, rate and pulsed output
- Option Modules provide added functionality and convenience
- Simple menu-driven setup
- NEMA 4X rated front panel for use in washdown environments

OVERVIEW

OPERATION

1. Total Display: Indicates the present count value, which is equal to the number of pulses received (since the last reset) multiplied by the Totalizer Prescale Value in Program mode.

2. Down Key: Toggles the unit between the total and rate displays. When the program input is active this key is used to scroll through the menu items. After a menu item has been chosen for editing, the down key is used to set the value for the currently selected (flashing) digit.

3. Next/Reset Key: If the total value is being displayed depressing this key will cause the value to be reset to 0. When the program input is active this key is used to select a menu item for editing (left most digit will begin to flash) and then move to the desired digit to be changed.

4. Rate Display: Indicates the rate value, which is equal to the input frequency multiplied by the Rate Prescale Value in Program Mode.

REAR TERMINAL CONNECTIONS

1. Common

2. High Speed Input - PNP or square signals up to 10 kHz*

3. Low Speed Input - NPN or dry contact inputs up to 30 Hz

4. Remote Reset - Resets count value when switched to common

5. Front Panel Program Enable - Allows access to program mode when tied to common

6. & 7. SSR Output (Form A)

8. DC Supply Input - 10 to 28 VDC for backlighting and/or powering the output

* For high speed current sinking devices, provide a pull-up resistor from terminal 2 to a DC source
**SET UP**

**INSTALLATION**

Battery Slots

Battery Installation - The unit is shipped with two batteries, which are not installed. Remove the battery cover by pushing inward and down. Install the batteries in the two slots. The two batteries are capable of sustaining the output for 6 months at 50% duty cycle. To extend the battery life to 5 years utilize an external DC supply or the AC option module for powering the output. Once the battery is in place the unit will go into a self test mode, and all the segments on the LCD display will be illuminated. The self test mode is exited by depressing the Next key, which will then display the model number (9). Depress the Next key again to ready the unit for operation.

Front Panel Installation - Place the unit in the panel through the 33mm x 68mm cutout. Slide the included gasket over the rear of the unit, then slide the panel mount bracket into place so that the 4 tabs catch in the groves on the top and the bottom of the unit (the bracket should be oriented so that the tabs are on the side nearest the panel). Used the provided panel mount screws to tighten the bracket until there is a secure seal against the gasket.

**PROGRAMMING**

Programming can be accessed, when the Program Enable input is active, by pressing the Down key while the rate value is being shown on the display. To edit a parameter use the Down key to scroll until the desired parameter appears on the screen. Pressing the Next key will cause the leftmost digit of that value to begin to flash. Use the Next and Down keys in combination to choose individual digits and change their value.

1. **Count Input Calibrator:** Multiplies the input pulses by a value settable from 0.0001 to 99.9999, and displays the results as the count value.

2. **Count Decimal Point:** Sets the decimal point on the count display from Off to 0.00000. The Next key is used to scroll through the choices.

3. **Rate Calibrator Decimal Point:** Sets the decimal position to be used with the Rate Input Calibrator in a range from X.XXX to XXXX.

4. **Rate Input Calibrator:** Multiplies the input frequency by this value and displays the results as the rate value. In combination with the Rate Decimal Point Parameter the calibrator value can be set in a range from 0.001 to 9999.

5. **Rate Display Decimal Point:** Sets the decimal position to be used for the rate display in a range from Off to 0.000. This parameter can also be used to set a dummy zero (_ _ _ _ 0) which enables the rate display to have 5 digits with the LSD always being 0. The Next key is used to scroll through the choices.

6. **Output Scaler:** Retransmits the input pulses by multiplying them by a value settable from 0.0001 to 0.9999.

7. **Front Panel Reset Enable:** When active (ON) the count value, when being displayed, can be reset by pressing the Next/Reset key. If set to OFF, the total value can only be reset through the remote input.

8. **Output Enable:** When active (on), the SSR output will pulse to retransmit input pulses. If set to off, it will not activate. (Use the "off" setting to conserve battery life if not using the output)
**SPECIFICATIONS**

**High Speed Input (Terminal 2):**
Type: PNP Signal or square wave pulse  
Count Speed: 10 kHz max (50% duty cycle),  
Logic: Low < 1.0 VDC, High > 2.0 VDC  
Minimum Pulse Width: 45 μsecond  
Maximum Input: 28VDC

**Low Speed Input (Terminal 3):**
Type: NPN Signal, Contact Closure  
Count Speed: 30 Hz max (50% duty cycle)  
Logic: Low < 1.0 VDC, High > 2.0 VDC  
Minimum Pulse Width: 12 ms  
Maximum Input 28VDC

**Front Panel Enable Input (Terminal 5)**
Type: NPN Signal, Contact Closure; level sensitive  
Maximum Input: 28 VDC

**Remote Reset Input (Terminal 4)**
Type: NPN Signal, Contact Closure; edge sensitive  
Frequency Response: 30 Hz (50% duty cycle)  
Maximum input: 28 VDC

**Output (Terminals 6 & 7)**
Type: Isolated Photomos Relay  
Load Rating: 0.1 Amp @ 30 VAC/VDC  
Transition Time: < 5ms

**Power Source:**
Type: Single or dual 3V Lithium battery  
Expected Life: 5 years typical-single battery if using AC power supply option module or external DC supply. 6 months if used alone with 50% duty cycle output. No reduction in battery life if output is programmed to "off"  
Low Power Indicator: "Low Bat" flashes on display approx. 2 weeks prior to end of battery life

**Display:**
Type: Supertwist LCD for use with or without back lighting  
Number: 8 digits count value, 4 digits for rate  
Height: 12mm  
Back lighting: Green Illumination over whole viewable area with a 10 to 28 VDC supply (Terminal 8)

**Physical:**
Dimensions: 36mm x 72mm, 38mm deep  
Mounting: Panel Mount (mounting bracket supplied)  
33mm x 68mm (+ 0.3mm) panel cutout  
Connections: Up to 8 screw terminals  
Weight: Approximately 2.25 ounces

**WARRANTY**

Standard products manufactured by the Company are warranted to be free from defects in workmanship and material for a period of one year from the date of shipment, and products which are defective in workmanship or material will be repaired or replaced, at the option of the Company, at no charge to the Buyer. Final determination as to whether a product is actually defective rests with the Company. The obligation of the Company hereunder shall be limited solely to repair and replacement of products that fall within the foregoing limitations, and shall be conditioned upon receipt by the Company of written notice of any alleged defects or deficiency promptly after discovery within the warranty period, and in the case of components or units purchased by the Company, the obligation of the Company shall not exceed the settlement that the Company is able to obtain from the supplier thereof. No products shall be returned to the Company without its prior consent. Products which the Company consents to have returned shall be shipped F.O.B. the Company's factory. The Company cannot assume responsibility or accept invoices for unauthorized repairs to its components, even though defective. The life of the products of the Company depends, to a large extent, upon the type of usage thereof, and THE COMPANY MAKES NO WARRANTY AS TO FITNESS OF ITS PRODUCTS FOR SPECIFIC APPLICATIONS BY THE BUYER NOR AS TO PERIOD OF SERVICE UNLESS THE COMPANY SPECIFICALLY AGREES OTHERWISE IN WRITING AFTER THE PROPOSED USAGE HAS BEEN MADE KNOWN TO IT. THE FOREGOING WARRANTY IS EXCLUSIVE AND IN LIEU OF ALL OTHER WARRANTIES EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO ANY WARRANTY OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE.
